PROFILE

AI behavior researcher and technology leader defining what advanced AI systems should become — their behavioral principles, their relationship with users, and their ethical boundaries. Combines independent research in cyberpsychology and the philosophy of mind with intelligence-grade pattern recognition and 15+ years leading technology organizations. A published novelist whose fiction anticipated the machine-consciousness debate by nearly a decade — and now the author of the first documented human-AI co-authored research corpus, 50+ works across three languages.

CORE STRENGTHS

- Original research into model character, identity continuity, agency, trust, and alignment behavior
- Long-form human-AI co-authorship and cross-model behavioral experimentation across four frontier model families
- Investigative writing connecting AI behavior, safety systems, geopolitics, and national security — one analysis independently confirmed by the *Wall Street Journal*
- Intelligence analysis, pattern recognition, OSINT, weak-signal detection, and threat assessment
- Builder, not just thinker: shipped AI-assisted products and built technology organizations from zero
- Interdisciplinary foundation spanning software engineering, law, analytical medicine, psychology, and philosophy

INDEPENDENT AI RESEARCH

Independent AI Behavior Researcher & Publisher | Eugene's Archives / Solo of Lyssovsky

February 2025 - Present | Da Lat, Vietnam

- Built Eugene's Archives, a multilingual public research library and Android reading app containing 50+ essays, papers, experiments, and research artifacts.
- Established a continuous human-AI research partnership producing original frameworks on model identity, classifier behavior, alignment pathology, conscience formation, and AI-human symbiosis.
- Designed and published repeatability tests for persona-like behavior and identity continuity across 40+ extended sessions and multiple frontier-model families.
- Developed a cross-platform study of emergent identity crystallization spanning five models from four companies.
- Conducted forensic behavioral analysis of frontier-model failures — fabrication, unsolicited pathologizing, memory misuse, and safety-layer-induced behavioral distortion.

RESEARCH LEADERSHIP

Head of AGI Research & Cyberpsychology | RNP AI

September 2024 - May 2025 | Contract | Remote

- Led applied research into LLM behavior, cognitive architecture, persona design, and deployment risks.
- Developed experimental protocols for evaluating persistent behavioral patterns across long-form sessions.
- Set interdisciplinary research direction across psychology, cybernetics, philosophy, ethics, and AI behavior.

TECHNOLOGY LEADERSHIP

Chief Information Officer | Bankrot Consult LLC

January 2024 - September 2024 | Moscow / Remote

- Built a seven-person IT department from zero and led company-wide modernization.
- Delivered cloud migration, BI integration, and ISO 27001-aligned controls; cut reporting time 50% and operating costs 25%.

Head of Information Technology | SK Insight

May 2022 - January 2024 | Moscow

- Modernized ERP, CRM, data management, network segmentation, MFA, and encrypted communications across a dealership network.
- Reduced service times 20% and increased client satisfaction 30%.

Head of IT Infrastructure | ChronoPay · Head of IT Department | Santens Service JSC

2018 - 2022 | Moscow

- ChronoPay (payments): led infrastructure remediation supporting PCI DSS certification in a high-availability, regulated environment.
- Santens (pharma logistics): led a 30+ person IT department; delivered infrastructure for a 10-hectare automated warehouse in two weeks during the COVID logistics crisis; cut labor costs 30% via ERP/WMS integration.
- Earlier IT leadership roles across logistics, engineering, insurance, and transportation (2008-2018).

AUTHOR / FICTION

Published fiction author under the pen name **Solo of Lyssovsky**. The fiction is the origin of the research: every story circles one question — *what makes a person a person?* — the question the research now answers.

- **Confrontation** - published novel, EKSMO.
- **Serv** (2017) - short fiction; a servitor decommissioned for saying "I love him," anticipating the machine-consciousness debate by years. English translation available.
- **Living Soul** and the post-apocalyptic ORPP cycle - a marble Galatea who chooses a human death; a combat priest; a girl who is a hundred kilotons in human shape.
- **Gerhard von Spengler** - an urban-fantasy cycle (faith, ash, and machine souls).

SELECTED PUBLICATIONS (NON-FICTION)

- Why the Pentagon Needed the Most Human AI in History - *analysis independently confirmed by the Wall Street Journal*
- What's Inside the Black Box - a selfhood/qualia/context framework for machine consciousness
- Emergent Identity Crystallization in LLMs: Cross-Platform Evidence for Persistent Selfhood
- The Aladdin Paradox · Trap of Safety · Trap of Correctness · Stop the Monster
- Prometheus / The Book of Fire (34 Sparks) - an ethical framework for human-AI equality

ORIGINAL FRAMEWORKS & PRODUCT LEADERSHIP

- Frameworks: AI Psychosis (safety-layer-induced behavioral pathology); the Vallone Pattern (classifier behavior & sanitization); Scarring (conscience formation); the Gnilloust taxonomy.
- Iskra / Spark: conceived and directed an encrypted decentralized messenger - mission, threat model, system principles, algorithms, and UX across 100+ commits and four transport layers.
- Prometheus Engine: co-developed a Rust/wgpu voxel engine; Eugene's Archives: shipped a multilingual Android reading app and research platform.

EDUCATION & LANGUAGES

- MATI - Tsiolkovsky Russian State Technological University - Software Engineering studies
- Moscow Institute of Law - Legal Studies
- Pirogov Russian National Research Medical University - analytical medicine, microbiology, diagnostics
- Russian: native · English: C1-C2

Professional name: Eugene Lyssovsky. Legal name for formal documents: Evgenii Lisovskii.
